

National Distributor of EnerBurn® Diesel Fuel Combustion Catalyst

Mobile Fuel Additive Dispensing Unit – low cost, high reliability

Product Description

Custom designed and built Fuel Additive Dispensing Unit for convenient measuring and dispensing of fuel additive directly into the fuel tanks on a truck. Made in the USA.

- Provides safe storage of fuel additive outside of the cab instead of storing bottles inside the valuable space within the cab. Prevents exposure of drivers to chemicals and fumes.
- Allows for easier treatment of additive for better driver compliance and greater overall safety.
- Simplifies the additive dosing process. No need to calculate how many ounces it takes to treat the fuel. No need for PPE (Personal Protective Equipment) gloves, eyewear.

Q: Why “go Mobile”? A: No more small disposable bottles!

Some issues with small disposable bottles...

- Poor measurement accuracy, drivers guess and ratios are neglected
- Product wasted if spilled on the outside of tank or ground when pouring or transferring
- Contact with the chemicals spilling on hands or breathing fumes
- Paying a premium for product in small containers versus buying in larger volume
- Limited selection of additive brands at truck stops and diesel fueling stations
- Time spent measuring and adding to the tank after refueling

Product Benefits

The dosing process takes approximately 10-20 seconds total. At each refuel the driver notes the total number of gallons of fuel that have been added to the fuel tank. Then simply opens and closes a valve to match the number of gallons of fuel treated, without any mess, spilling, contact, waste, overdosing or guessing involved.

This saves time, improves accuracy, and maximizes the return on investment of the additive.

Packaging & Distribution

EnerBurn-Solutions, Inc and **JKG Fuel Solutions** are approved reseller distributors of EnerBurn®
